

# WAPH-Web Application Programming and Hacking

Instructor: Dr. Phu Phung

## Individual Project 1

### Front-end Web Development with a Professional Profile Website on github.io cloud service

#### Student

**Name:** Vishal Kothapalli

**Email:** kothapvl@mail.uc.edu

**Short-bio:** Graduate Student at UC

#### Individual Project Information

Project 1's URL: [(<https://github.com/kothapvl-uc/kothapvl-uc.github.io>)]

#### Overview

In this assignment, I will elevate my expertise in front-end web development by creating a Professional Profile Website and launching it on the github.io cloud platform. The project encompasses overall, non-technical, and technical criteria

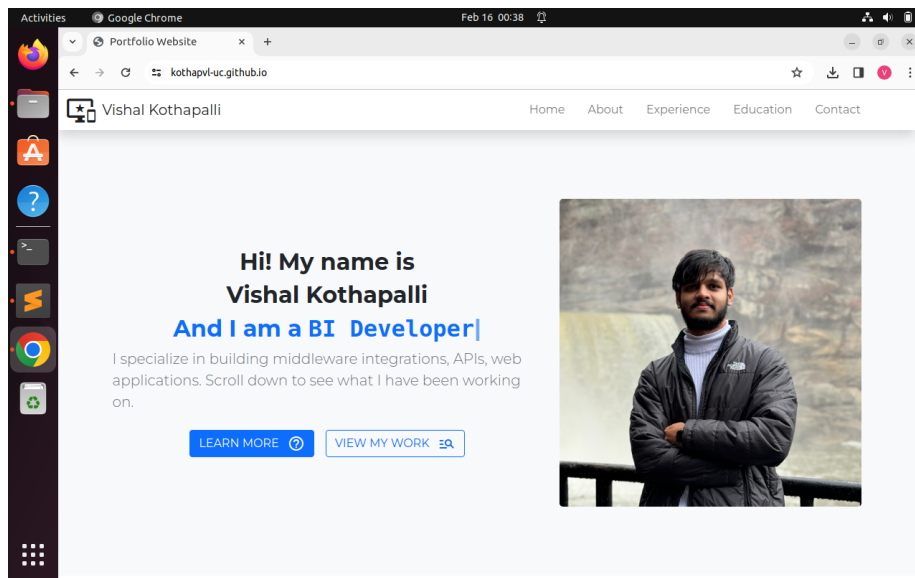

#### Task 1: General Requirements

**a. Deploy website** I have created the webpage and deployed it successfully to github.io

URL: [(<https://kothapvl-uc.github.io/>)]

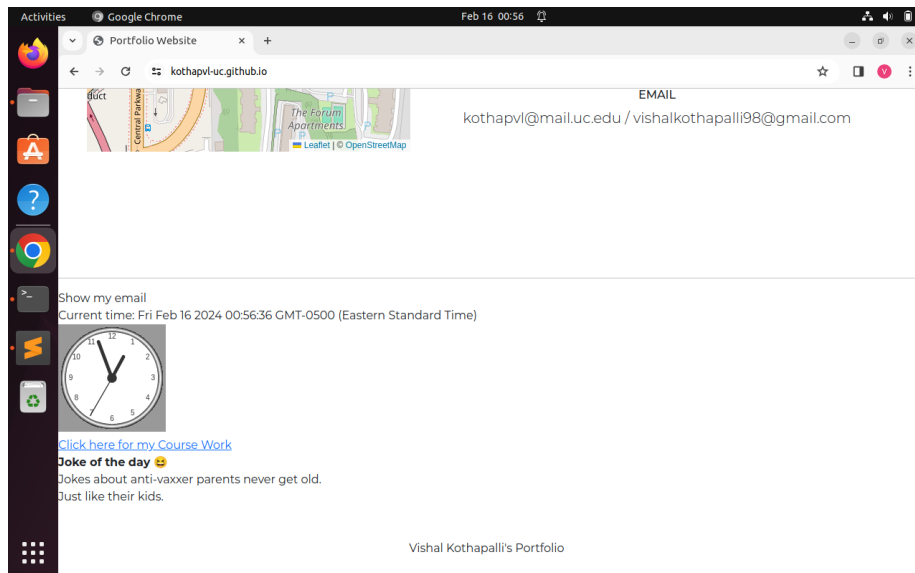

Figure 1: Vishal's headshot

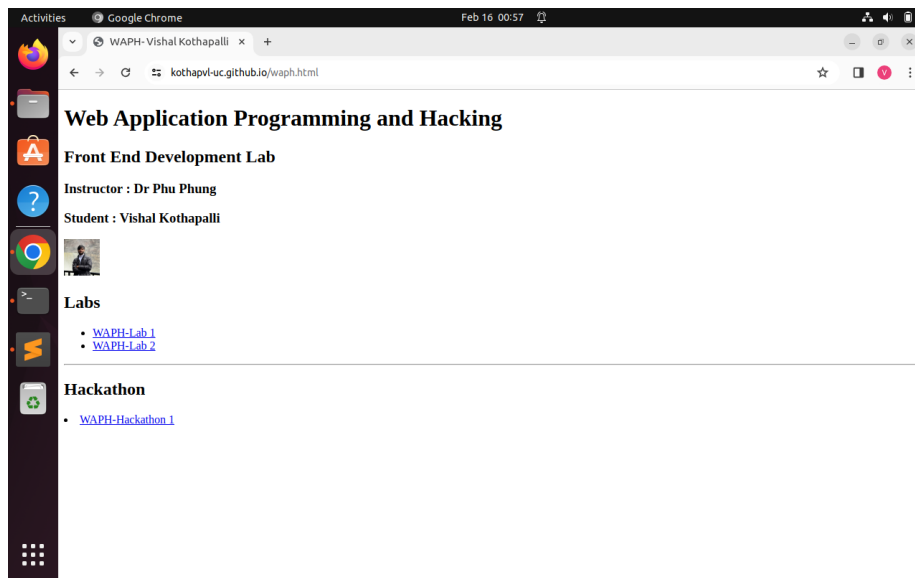

Deployed webpage

b. **Link to WAPH** Created an HTML page WAPH.html with the existing labs and hackathon details.

Link to redirect to the WAPH page

WAPH page

## Task 2: Non-technical requirements

a. Use an open-source CSS template Utilized bootstarp CSS to create the navigation bars and also to make the website all device compatible.

```
<link href="https://cdn.jsdelivr.net/npm/bootstrap@5.0.2/dist/css/bootstrap.min.css" rel="stylesheet">
```

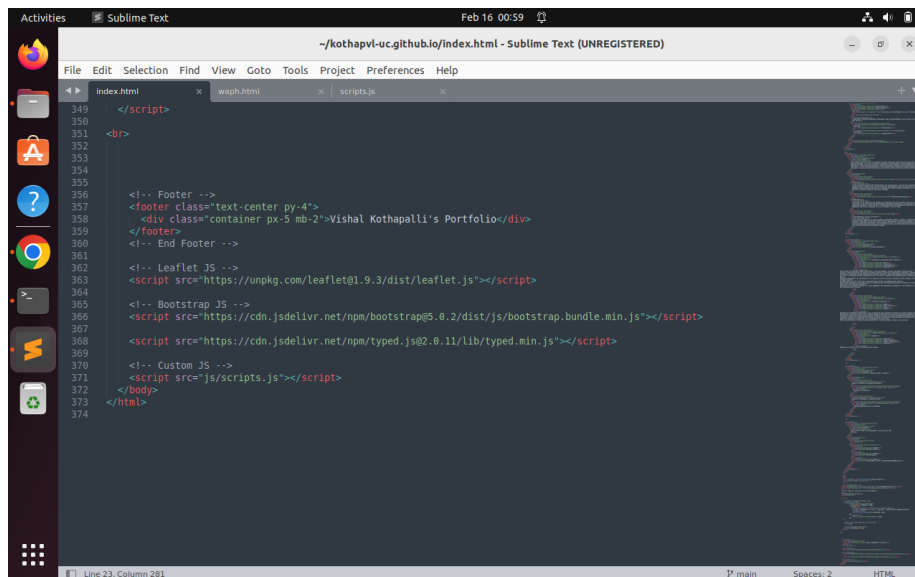

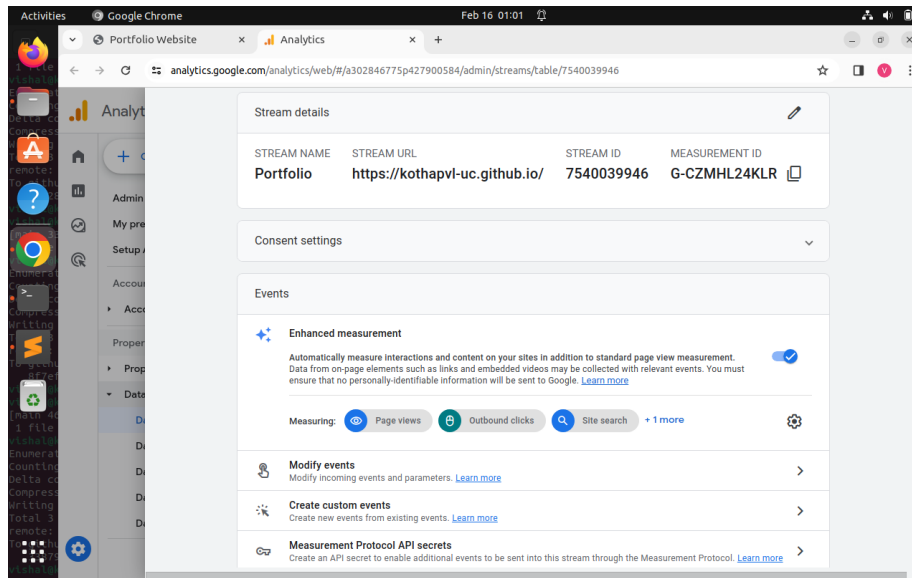

Image 3: Ajax implementation

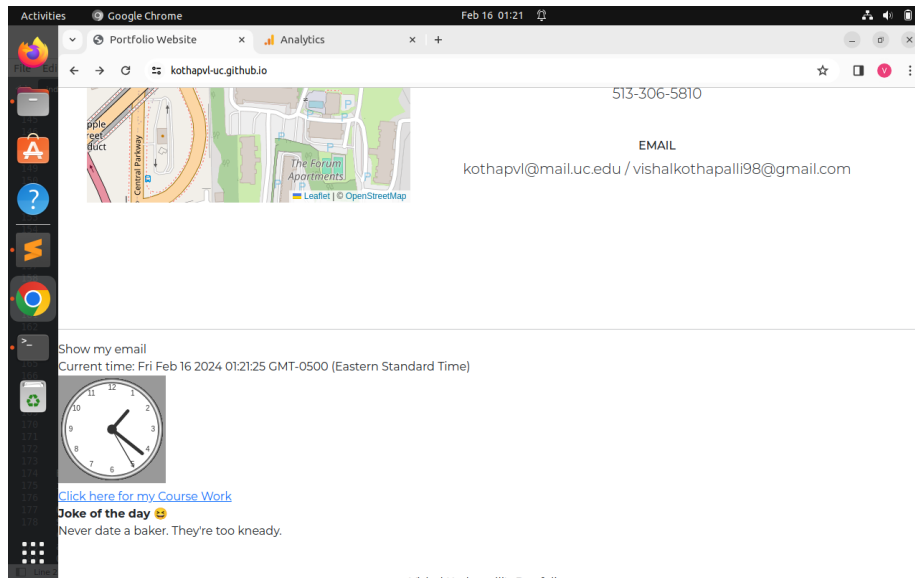

**b. Page tracker** Added google page analytics tracker and linked/installed the script into the webpage.

Portfolio Analytics

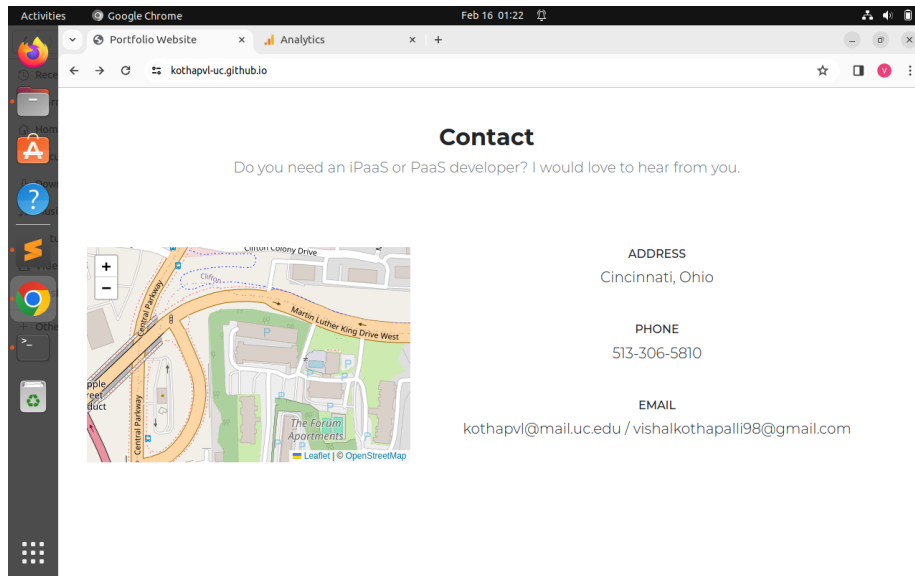

### Task 3: Technical requirements

**a. Basic JavaScript** Utilized the JavaScript used in the previous labs and implemented them in current website

Basic JavaScript with clocks and show mail

**b. APIs** Utilized the joke API from previous labs. Used the OpenStreetMap API to show my address location in the contact section of my webpage.

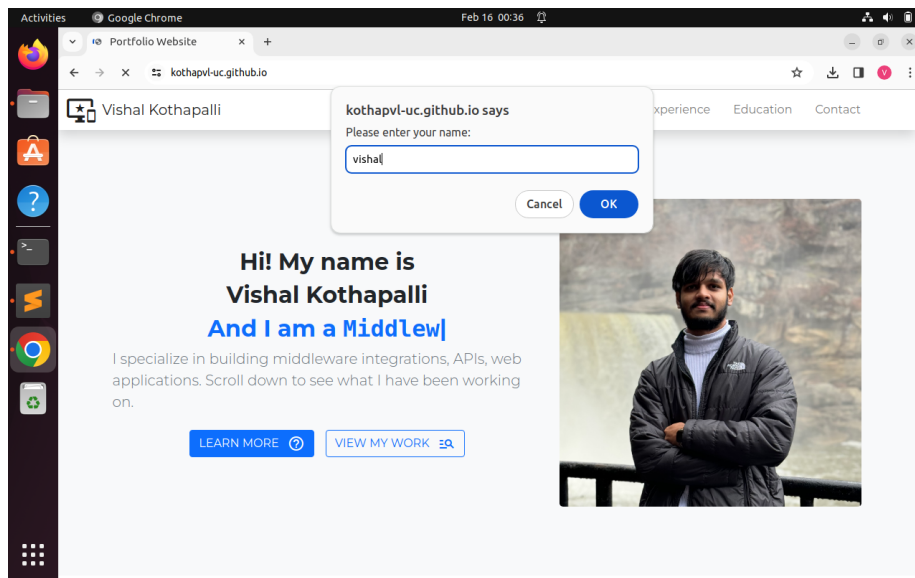

Open Street Map API

**b. JS Cookies** Enabled the cookie on the webpage to get, store and fetch cookies using javascript code.

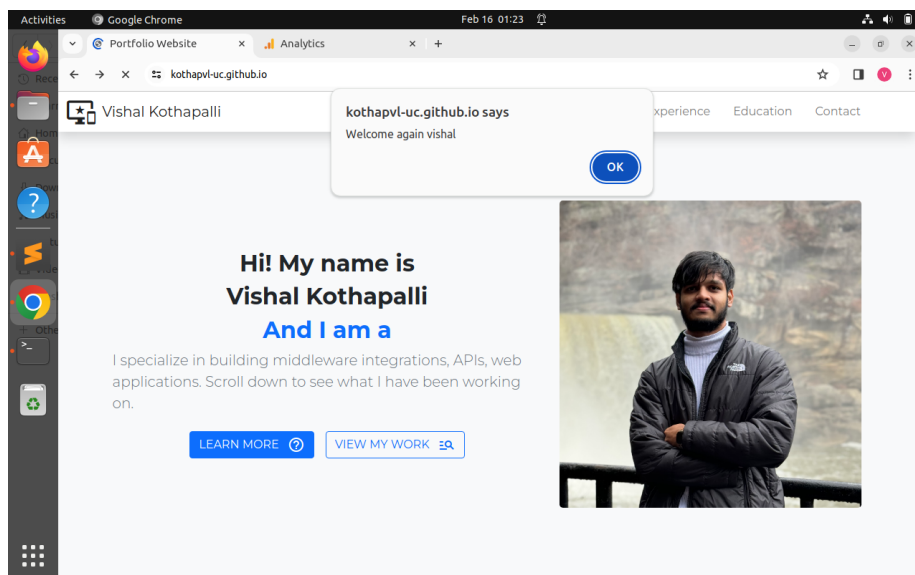

```
function setCookie(cname,cvalue,exdays) {
const d = new Date();
d.setTime(d.getTime() + (exdays*24*60*60*1000));
let expires = "expires=" + d.toUTCString();
document.cookie = cname + "=" + cvalue + ";" + expires + ";path=/";
}

function getCookie(cname) {
let name = cname + "=";
let decodedCookie = decodeURIComponent(document.cookie);
let ca = decodedCookie.split(';');
for(let i = 0; i < ca.length; i++) {
    let c = ca[i];
    while (c.charAt(0) == ' ') {
        c = c.substring(1);
    }
    if (c.indexOf(name) == 0) {
        return c.substring(name.length, c.length);
    }
}
return "";
}

function checkCookie() {
let user = getCookie("username");
if (user != "") {
    alert("Welcome again " + user);
} else {
    user = prompt("Please enter your name:", "");
    if (user != "" && user != null) {
        setCookie("username", user, 30);
    }
}
}
```
